Settings Catalog Policies

[OIB] Win - OIB - SC - Credential Management - D - Passwordless - v3.3

Created: 8/11/2025

Last Modified: 8/11/2025

Assigned to: Not assigned

Imported from Open Intune Baseline on 8/11/2025. NOTE: Applying this policy can cause issues with UAC and elevation if not using Windows LAPS and the built-in Administrator account.

Setting	Value	Description
Assign the following credential provider as the default credential provider: (Device)	policy config admx credentialproviders defaultcredentialprovider 1	
Enable Passwordless Experience	policy config authentication enablepasswordlessexperience 1	Specifies whether connected users on AADJ devices receive a Passwordless experience on Windows
Enable Web Sign In	policy config authentication enablewebsignin 1	Specifies whether web-based sign-in is allowed for signing in to Windows

[OIB] Win - OIB - SC - Defender Antivirus - D - Additional Configuration - v3.6

Created: 8/11/2025

Last Modified: 8/11/2025

Assigned to: Not assigned

Imported from Open Intune Baseline on 8/11/2025. NOTE: Some of these settings require the device to be onboarded to Defender for Endpoint.

Setting	Value	Description
Enable Convert Warn To Block	defender configuration enableconvertwarnblock 1	This setting controls whether network protection blocks network traffic instead of displaying a warning
Enable Dynamic Signature Dropped Event Reporting	defender configuration reporting enabledynamicsignaturedroppedeventreporting 1	This setting controls whether to report a Dynamic Security Intelligence Update dropped event. By default, such events are not reported.
Enable File Hash Computation	defender configuration enablefilehashcomputation 1	Enables or disables file hash computation feature. When this feature is enabled Windows defender will compute hashes for files it scans.
Hide Exclusions From Local Admins	defender configuration hideexclusionsfromlocaladmins 1	This policy setting controls whether or not exclusions are visible to local admins. To control local users exclusions visibility use HideExclusionsFromLocalUsers. If HideExclusionsFromLocalAdmins is set then HideExclusionsFromLocalUsers will be implicitly set.
Hide Exclusions From Local Users	defender configuration hideexclusionsfromlocalusers 1	This policy setting controls whether or not exclusions are visible to local users. If HideExclusionsFromLocalAdmins is set then this policy will be implicitly set.
Intel TDT Enabled	defender configuration inteltdtenabled 1	This policy setting configures the Intel TDT integration level for Intel TDT-capable devices.

Oobe Enable Rtp And Sig Update	defender configuration oobeenablelrtpandsigupdate 1	This setting allows you to configure whether real-time protection and Security Intelligence Updates are enabled during OOBE (Out of Box experience).
Passive Remediation	Not configured	Setting to control automatic remediation for Sense scans.
Quick Scan Include Exclusions	defender configuration quickscanincludeexclusions 1	This setting allows you to scan excluded files and directories during quick scans.
Support Log Location	%ProgramData%\Microsoft\IntuneManagementExtension\Logs	The support log location setting allows the administrator to specify where the Microsoft Defender Antivirus diagnostic data collection tool (MpCmdRun.exe) will save the resulting log files. This setting is configured with an MDM solution, such as Intune, and is available for Windows 10 Enterprise.

Compliance Policies
