

Runs locally. Read-only. Your own app registration.

The desktop app runs on the admin's computer, signs in through an app registration you create in your own tenant, and reads Intune configuration directly from Microsoft Graph. Your Intune data, Microsoft tokens and exported documents never leave the computer.

Your own app registration

You create and control it in your tenant. No vendor app, no vendor client ID, no consent to a third party. Delete it and the app stops working.

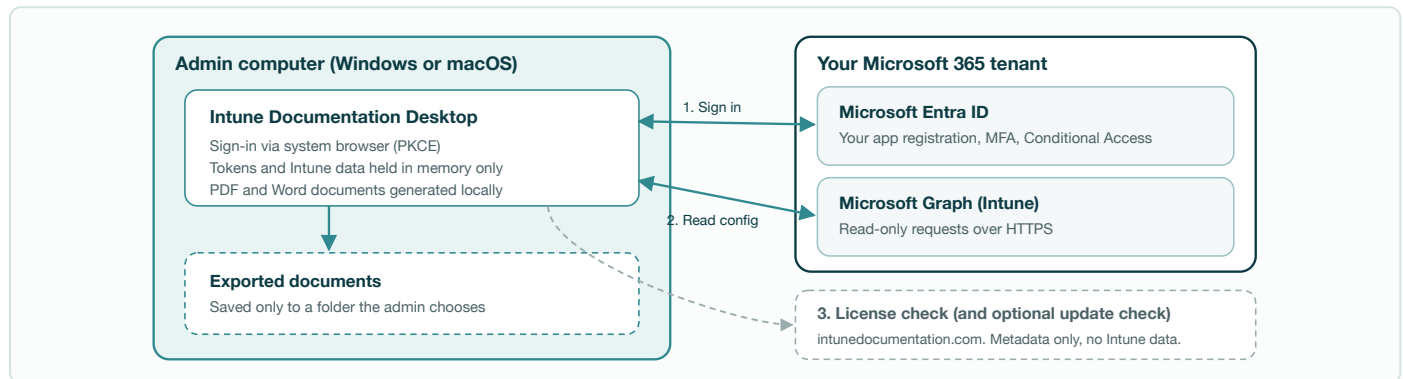

Read-only, delegated access

Delegated Graph permissions only. The app never sees more than the signed-in admin's own Intune roles allow, and it makes no changes.

Intune data stays local

Configuration is held in memory and documents are built on the computer. No vendor server processes or stores Intune data. No telemetry.

ARCHITECTURE

EVERYTHING THAT LEAVES THE COMPUTER (NO INTUNE DATA GOES TO THE VENDOR)

PURPOSE	DESTINATION	WHAT IS SENT
Sign-in	login.microsoftonline.com	Standard OAuth request to your tenant with your app registration
Read configuration	graph.microsoft.com	Read-only requests with the admin's token; Intune data flows only from Microsoft to the computer
License check	intunedocumentation.com	License key, tenant ID, client ID, random install ID, OS, app version, and a short-lived Microsoft ID token to confirm the tenant (it contains the admin's name and UPN, which are not stored)
Update check	intunedocumentation.com, github.com	Version check and signed installer download; can be turned off in Settings

GRAPH PERMISSIONS (DELEGATED, READ-ONLY)

User.Read	Sign-in
DeviceManagementConfiguration.Read.All	Policies and profiles
DeviceManagementApps.Read.All	Apps and app policies
DeviceManagementManagedDevices.Read.All	Device OS only
DeviceManagementRBAC.Read.All	Roles and scope tags
DeviceManagementServiceConfig.Read.All	Enrollment settings
DeviceManagementScripts.Read.All	Scripts
Group.Read.All	Assignment group names
Policy.Read.All	Conditional Access

Plus openid, profile and offline_access. No application permissions. GET requests only (a /\$batch POST carries GETs). Graph beta endpoint.

YOUR CONTROLS

- ✓ **Assignment required.** Limit the enterprise app to a named admin group.
- ✓ **Conditional Access.** Require MFA and a compliant device for this app. Sign-ins appear in your Entra logs.
- ✓ **Least privilege.** Read-only roles are enough, for example Intune Read Only Operator plus Global Reader.
- ✓ **Update control.** Automatic update checks can be switched off in Settings. Updates never download without the admin's approval unless they turn that on.
- ✓ **Verify it yourself.** Graph activity logs filtered by your client ID show every call is a read.
- ✓ **Revoke anytime.** Disable or delete the app registration.

Vendor. Ugurlabs UG (haftungsbeschränkt), Düsseldorf, Germany. Licensing service hosted in Frankfurt (EU). DPA available on request. Security contact: security@ugurlabs.com
