

Technical Evidence Report: Intune Configuration

SOC 2

Trust Services Criteria

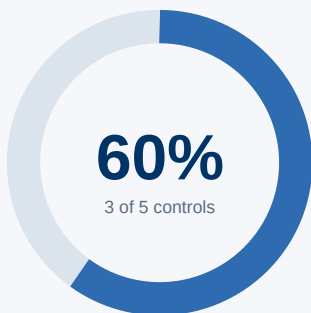

Evidence matrix for selected assessment points, read from the Microsoft Intune configuration

TENANT

Contoso Ltd

Report date **2026-10-08**

Classification **Internal**

Controls with supporting technical evidence
Supporting evidence only, not a compliance score

AT A GLANCE

① Supporting or partial evidence	3
○ No recognized evidence	1
▲ Mixed policy evidence	1

Evidence is read from the Microsoft Intune configuration export on the report date and mapped using ruleset 2026.10.2. Organizational aspects of each control are listed separately for review.

01 EXECUTIVE SUMMARY

Summary

60%

CONTROLS WITH TECHNICAL EVIDENCE

3 of 5 assessable controls have supporting technical evidence in the Intune configuration.

34 of 50 technical safeguards are set up and switched on in Intune.

0 of 5 selected controls with configuration evidence (3 partial)
5 in scope; 0 outside scope; 0 not assessed; 1 mixed policy evidence. Entries are selected mappings, not full framework coverage.

controls with technical evidence

CC6

3 of 4

CC7

0 of 1

Assigned deviating configurations: 3.

At least one assigned policy explicitly contradicts the target configuration.

Configured settings without assignment: 3.

The detected target configuration is not effective until it is assigned.

Key findings

ordered by severity, then control

Assigned deviation

CC6.7

See page 5

Diagnostic data minimized (Windows)

Assigned deviating configuration affects CC6.7.

Assigned deviation

CC6.8

Office macro runtime scanning for all documents

Assigned deviating configuration affects CC6.8.

Assigned deviation

CC7.1

Quality update timing within 14 days: Assigned deviating configuration affects CC7.1.

Not assigned

CC6.6

Host firewall (Windows Firewall): Configured setting without assignment affects CC6.6.

See page 4

Not assigned

CC6.8

System Integrity Protection: Configured setting without assignment affects CC6.8.

1 further finding is listed in the full report.

SCOPE NOTE

This report documents technical evidence from the tenant's Microsoft Intune configuration. It is not a compliance certification or an IT Grundschutz check and does not replace an audit. Missing evidence means that no supported configuration with a known assignment was detected in the evaluated dataset.

Note: Device-management evidence for selected Common Criteria, referenced by criterion ID with original summaries. A SOC 2 examination covers far more than device configuration; this mapping supports evidence collection only.

02 RESULTS

Results Overview

Each selected control, its rolled up status, how many of its capabilities are evidenced, and where the supporting evidence is recorded.

CONTROL	STATUS	CAPABILITIES	EVIDENCE	PAGE
CC6				3 of 4 with evidence
CC6.1 Logical access controls	Supporting or partial evidence	12 of 13	15 evidence items	n/a
CC6.6 Protection against external threats	No recognized evidence	0 of 2	E-001E-002E-003	4
CC6.7 Restricted data movement	Supporting or partial evidence	1 of 3	E-004E-005	5
CC6.8 Unauthorized software prevention	Supporting or partial evidence	14 of 24	22 evidence items	n/a
CC7				0 of 1 with evidence
CC7.1 Vulnerability and configuration monitoring	Mixed policy evidence	7 of 8	10 evidence items	n/a

3 Supporting or partial evidence 1 No recognized evidence 1 Mixed policy evidence

Sample report: detail pages are included for selected controls only (CC6.6, CC6.7). A full report includes a detail page for every control.

HOW TO READ THIS REPORT

Configuration evidence

Supporting or partial evidence

No recognized evidence

Mixed policy evidence

Not assessed

Outside selected scope

Technical configuration evidence detected

Technical configuration evidence partially detected

No supported technical configuration evidence detected

Mixed policy evidence

Not assessed

Outside selected scope

- Status is shown by marker shape and label, never by colour alone.
- A control rolls up from its capabilities. A capability rolls up from its checks.
- Only assigned policies count as evidence. Configured but unassigned settings are reported separately.
- Evidence references point to rows of the evidence register in Appendix A.

ABOUT THE METHOD

Methodology

Evidence is determined exclusively from concrete Intune settings: An assessment point is considered technically evidenced only when a recognized setting is configured with a recognized value and the policy is assigned. Configurations that explicitly contradict the target state are reported separately. Unsupported settings or settings that cannot be mapped unambiguously remain unassessed. Organizational requirements are not part of this automated technical assessment and must be assessed separately.

03 CONTROL DETAIL

CC6.6

No recognized evidence

Protection against external threats

3 match, 1 missing, 0 different

0 of 2 capabilities

3 evidence references

Host firewall (Windows Firewall) Windows
