

Technical Evidence Report: Intune Configuration

HIPAA Security Rule

45 CFR Part 164, Subpart C

Evidence matrix for selected assessment points, read from the Microsoft Intune configuration

TENANT

Contoso LtdReport date **2026-10-08**Classification **Internal****Controls with supporting technical evidence**

Supporting evidence only, not a compliance score

AT A GLANCE

● Supporting or partial evidence	8
○ No recognized evidence	1

Evidence is read from the Microsoft Intune configuration export on the report date and mapped using ruleset 2026.10.3. Organizational aspects of each control are listed separately for review.

DOCUMENT CONTROL

Classification Internal	Report date 2026-10-08		

01 EXECUTIVE SUMMARY

Summary

SCOPE NOTE

This report documents technical evidence from the tenant's Microsoft Intune configuration. It is not a compliance certification or an IT Grundschutz check and does not replace an audit. Missing evidence means that no supported configuration with a known assignment was detected in the evaluated dataset.

9 of 54 published requirements have Intune evidence mappings. Supporting evidence only; this is not a full assessment or compliance score.

02 RESULTS

Results Overview

Each selected control, its rolled up status, how many of its capabilities are evidenced, and where the supporting evidence is recorded.

CONTROL	STATUS	CAPABILITIES	EVIDENCE	PAGE
§ 164.308 Administrative safeguards				2 of 2 with evidence
164.308(a)(5)(ii)(B) Protection from Malicious Software	Supporting or partial evidence	5 of 6	9 evidence items	n/a
164.308(a)(5)(ii)(D) Password Management	Supporting or partial evidence	1 of 1	1 evidence item	n/a
§ 164.310 Physical safeguards				2 of 2 with evidence
164.310(b) Workstation Use	Supporting or partial evidence	1 of 4	2 evidence items	n/a
164.310(c) Workstation Security	Supporting or partial evidence	7 of 7	10 evidence items	n/a
§ 164.312 Technical safeguards				4 of 5 with evidence
164.312(a)(1) Access Control	Supporting or partial evidence	2 of 3	2 evidence items	n/a
164.312(a)(2)(iv) Encryption and Decryption	Supporting or partial evidence	3 of 3	E-001 E-002 +4	4
164.312(b) Audit Controls	No recognized evidence	0 of 4	None recorded	5
164.312(c)(1) Integrity	Supporting or partial evidence	5 of 9	9 evidence items	n/a
164.312(d) Person or Entity Authentication	Supporting or partial evidence	6 of 7	6 evidence items	n/a

8 Supporting or partial evidence 1 No recognized evidence

Sample report: detail pages are included for selected controls only (164.312(a)(2)(iv), 164.312(b)). A full report includes a detail page for every control.

HOW TO READ THIS REPORT

● Configuration evidence

● Supporting or partial evidence

○ No recognized evidence

▲ Mixed policy evidence

▲ Not assessed

○ Outside selected scope

Technical configuration evidence detected

Technical configuration evidence partially detected

No supported technical configuration evidence detected

Mixed policy evidence

Not assessed

Outside selected scope

1. Status is shown by marker shape and label, never by colour alone.

2. A control rolls up from its capabilities. A capability rolls up from its checks.

3. Only assigned policies count as evidence. Configured but unassigned settings are reported separately.

4. Evidence references point to rows of the evidence register in Appendix A.

03 CONTROL DETAIL

EVIDENCE

E-003E-004E-005

Compliance requirement, not an observed device state. Marks noncompliant after 24 hours. Resource access depends on applicable Conditional Access policies; effective access is unverified.

Storage encryption (Android) Android

Compliance requirement assigned

CHECK	EXPECTED	ACTUAL	RESULT
Storage Require Encryption storageRequireEncryption AND - Compliance - Work profile	true	true	Matches expected value

POLICY

AND - Compliance - Work profileAssigned: Group: Corporate Mobile Devices

EVIDENCE

E-006

164.312(a)(2)(iv) (continued)

Compliance requirement, not an observed device state. Marks noncompliant after 24 hours. Resource access depends on applicable Conditional Access policies; effective access is unverified.

▲

Additional verification: not assessed by technical evidence

Effective encryption state on each device, key management, encryption of ePHI on servers and removable media, and the documented decision for this addressable specification are unassessed.

164.312(b)

No recognized evidence

Required

Audit Controls

0 match, 4 missing, 0 different

!

Gap: Audit Controls

No technical evidence was found. Possible implementation through these Intune settings:

- device_vendor_msft_policy_config_audit_detailedtracking_auditprocesscreation
- device_vendor_msft_policy_config_admx_auditsettings_includecmdline
- device_vendor_msft_policy_config_admx_powershellexecutionpolicy_enablemodulelogging_listbox_modulenames
- device_vendor_msft_policy_config_windowspowershell_turnonpowershellscriptblocklogging

▲

Additional verification: not assessed by technical evidence

Audit logging in systems that contain or use ePHI, log collection, retention and the regular examination of recorded activity require separate assessment.

Referenced assessment points for each item of evidence are listed in the relevant sections.

APPENDIX B

Methodology

Evidence is determined exclusively from concrete Intune settings: An assessment point is considered technically evidenced only when a recognized setting is configured with a recognized value and the policy is assigned. Configurations that explicitly contradict the target state are reported separately. Unsupported settings or settings that cannot be mapped unambiguously remain unassessed. Organizational requirements are not part of this automated technical assessment and must be assessed separately.

Note: Selected standards and implementation specifications from Appendix A to 45 CFR Part 164, Subpart C (18 standards and 36 implementation specifications). These mappings provide supporting Intune configuration evidence for safeguards on managed endpoints, not a HIPAA risk analysis or a complete assessment. Administrative and physical safeguards, ePHI scope and the documented decision for each addressable specification require separate review. The proposed rule of January 2025 is not final and is not reflected.
