

Technical Evidence Report: Intune Configuration

NIS2 Directive

Directive (EU) 2022/2555, Art. 21(2)

Evidence matrix for selected assessment points, read from the Microsoft Intune configuration

TENANT

Contoso LtdReport date **2026-10-08**Classification **Internal****Controls with supporting technical evidence**

Supporting evidence only, not a compliance score

AT A GLANCE

① Supporting or partial evidence	4
○ No recognized evidence	1
▲ Mixed policy evidence	1

Evidence is read from the Microsoft Intune configuration export on the report date and mapped using ruleset 2026.10.3. Organizational aspects of each control are listed separately for review.

DOCUMENT CONTROL

Framework NIS2 Directive (EU) 2022/2555, Art. 21(2)		Tenant Contoso Ltd	Prepared for Information Security
Prepared by Endpoint Engineering	Report ID IDOC-NIS2-20261008-CTSO	Revision 1.0	Ruleset version 2026.10.3
Classification Internal	Report date 2026-10-08		

01 EXECUTIVE SUMMARY

Summary

Key findings

ordered by severity, then control

SCOPE NOTE

This report documents technical evidence from the tenant's Microsoft Intune configuration. It is not a compliance certification or an IT Grundschutz check and does not replace an audit. Missing evidence means that no supported configuration with a known assignment was detected in the evaluated dataset.

6 of 10 published requirements have Intune evidence mappings. Supporting evidence only; this is not a full assessment or compliance score.

Note: Supporting device-management evidence for selected cybersecurity risk-management measures of Art. 21(2). Organisational measures, such as risk analysis policies, business continuity, supply chain security and effectiveness assessment, are outside the scope of an Intune tenant export.

02 RESULTS

Results Overview

Each selected control, its rolled up status, how many of its capabilities are evidenced, and where the supporting evidence is recorded.

CONTROL	STATUS	CAPABILITIES	EVIDENCE	PAGE
Art. 21(2) Cybersecurity risk-management measures				4 of 6 with evidence
21.2.b Incident handling	No recognized evidence	0 of 4	None recorded	4
21.2.e Security in acquisition, development and maintenance	Mixed policy evidence	5 of 6	8 evidence items	n/a
21.2.g Basic cyber hygiene and training	Supporting or partial evidence	21 of 33	32 evidence items	n/a
21.2.h Cryptography and encryption	Supporting or partial evidence	3 of 3	E-001 E-002 +4	5
21.2.i Human resources security, access control and asset management	Supporting or partial evidence	9 of 11	9 evidence items	n/a
21.2.j Multi-factor authentication and secured communications	Supporting or partial evidence	2 of 3	2 evidence items	n/a

4

 Supporting or partial evidence

1

 No recognized evidence

1

 Mixed policy evidence

Sample report: detail pages are included for selected controls only (21.2.b, 21.2.h). A full report includes a detail page for every control.

HOW TO READ THIS REPORT

- Configuration evidence

● Supporting or partial evidence

○ No recognized evidence

▲ Mixed policy evidence

▲ Not assessed

○ Outside selected scope
- Technical configuration evidence detected

Technical configuration evidence partially detected

No supported technical configuration evidence detected

Mixed policy evidence

Not assessed

Outside selected scope

1. Status is shown by marker shape and label, never by colour alone.

2. A control rolls up from its capabilities. A capability rolls up from its checks.

3. Only assigned policies count as evidence. Configured but unassigned settings are reported separately.

4. Evidence references point to rows of the evidence register in Appendix A.

ABOUT THE METHOD

Methodology

Evidence is determined exclusively from concrete Intune settings: An assessment point is considered technically evidenced only when a recognized setting is configured with a recognized value and the policy is assigned. Configurations that explicitly contradict the target state are reported separately. Unsupported settings or settings that cannot be mapped unambiguously remain unassessed. Organizational requirements are not part of this automated technical assessment and must be assessed separately.

03 CONTROL DETAIL

21.2.b

No recognized evidence

Incident handling

0 match, 4 missing, 0 different

0 of 4 capabilities

0 evidence references

Process creation auditing with command lines Windows

No evidence

CHECK	EXPECTED	ACTUAL	RESULT
Process creation auditing with command lines windows-process-creation-logging	"Success" or "Success+ Failure"; alternative: "Enabled"	Not found	Missing
No supported setting was found after checking the collected policies.			
POLICY	No matching policy found		
EVIDENCE	None recorded		

PowerShell logging for all modules Windows

No evidence

CHECK	EXPECTED	ACTUAL	RESULT
PowerShell logging for all modules windows-powershell-module-logging	"*"; requires Turn on Module Logging: Enabled	Not found	Missing
No supported setting was found after checking the collected policies.			
POLICY	No matching policy found		
EVIDENCE	None recorded		

PowerShell script block logging enabled Windows

No evidence

CHECK	EXPECTED	ACTUAL	RESULT
PowerShell script block logging enabled windows-powershell-scriptblock-logging	"Enabled"	Not found	Missing
No supported setting was found after checking the collected policies.			
POLICY	No matching policy found		
EVIDENCE	None recorded		

PowerShell transcription enabled Windows

No evidence

CHECK	EXPECTED	ACTUAL	RESULT
PowerShell transcription enabled windows-powershell-transcription	"Enabled"	Not found	Missing
No supported setting was found after checking the collected policies.			
POLICY	No matching policy found		
EVIDENCE	None recorded		

21.2.b (continued)

Gap: Incident handling

No technical evidence was found. Possible implementation through these Intune settings:

- device_vendor_msft_policy_config_audit_detailedtracking_auditprocesscreation
- device_vendor_msft_policy_config_admx_auditsettings_includecmdline
- device_vendor_msft_policy_config_admx_powershellexecutionpolicy_enablemodulelogging_listbox_modulenames
- device_vendor_msft_policy_config_windowspowershell_turnonpowershellscriptblocklogging

Additional verification: not assessed by technical evidence

These settings support part of this control. Remaining technical and organizational requirements need separate assessment.

21.2.h

Supporting or partial evidence

Cryptography and encryption

6 match, 0 missing, 0 different

3 of 3 capabilities

6 evidence references

Disk encryption (BitLocker) Windows

Setting configured and assigned

CHECK	EXPECTED	ACTUAL	RESULT
Require Device Encryption device_vendor_msft_bitlocker_requireddeviceencryption WIN - Baseline - BitLocker	Enabled "device_vendor_msft_bitlocker_requireddeviceencryption_1"	Enabled "device_vendor_msft_bitlocker_requireddeviceencryption_1"	Matches expected value
BitLocker Enabled bitLockerEnabled WIN - Compliance - Baseline	true	true	Matches expected value

POLICY

WIN - Baseline - BitLocker

Assigned: Group: All Corporate Devices, Excluded: Group: Kiosk Devices

POLICY

WIN - Compliance - Baseline

Assigned: Group: All Corporate Devices

EVIDENCE

E-001

E-002

Compliance requirement, not an observed device state. Marks noncompliant after 24 hours. Resource access depends on applicable Conditional Access policies; effective access is unverified.

Disk encryption (FileVault) macOS

Setting configured and assigned

CHECK	EXPECTED	ACTUAL	RESULT
Enable com.apple.mcx.filevault2_enable MAC - FileVault enforcement	On "com.apple.mcx.filevault2_enable_0"	On "com.apple.mcx.filevault2_enable_0"	Matches expected value
Force Enable In Setup Assistant com.apple.mcx.filevault2_forceenableinsetupassistant MAC - FileVault enforcement	True "com.apple.mcx.filevault2_forceenableinsetupassistant_true"	True "com.apple.mcx.filevault2_forceenableinsetupassistant_true"	Matches expected value
Storage Require Encryption storageRequireEncryption MAC - Compliance - Baseline	true	true	Matches expected value

POLICY

MAC - FileVault enforcement

Assigned: Group: Corporate Mac Devices

POLICY

MAC - Compliance - Baseline

Assigned: Group: Corporate Mac Devices
